The diagram illustrates the timing of a CAN frame transmission on a 3-wire bus. The CAN-H and CAN-L signals are complementary, while CAN-SS remains high. The frame structure is as follows:

- SOF (Start of Frame):** Indicated by a recessive-to-dominant transition on CAN-H.
- Identifier (G1, G2, G3):** A 11-bit identifier transmitted on CAN-H and CAN-L. G1 and G2 are recessive, while G3 is dominant.
- FCS (Frame Check Sequence):** Indicated by a dominant-to-recessive transition on CAN-H.
- End of Frame:** Indicated by a recessive-to-dominant transition on CAN-H.
